[LinkedIn](#) · [Portfolio](#)

React Native developer with 4 years of commercial experience, building mobile apps end to end and shipping them to the App Store and Google Play. Comfortable owning the mobile side of a product on my own: architecture, native modules in Swift and Kotlin, offline-first data layers and store releases. Full-stack background on the backend (NestJS, PostgreSQL), which makes device-to-API integration work straightforward.

TECHNICAL SKILLS

Mobile: React Native (bare CLI & Expo), TypeScript, React Navigation, Redux Toolkit, MobX, Reanimated; Feature-Sliced Design / modular architecture

Native: Swift and Kotlin native modules, bridging to platform APIs, patching third-party libraries, Podfile / Gradle configuration, prebuild

Data & offline: SQLite offline-first storage, background sync with an operation queue and conflict resolution

Release: App Store & Google Play publishing: certificates, provisioning, release builds, store review and post-review fixes

Integrations: Push notifications (Firebase, OneSignal), in-app purchases, payment providers, WebSockets, REST & GraphQL

Backend: NestJS, TypeORM, Prisma, PostgreSQL, cron jobs

WORK EXPERIENCE

Full-Stack Developer (React Native + Node.js) | 71in.ua Mar 2026 – Present

- Main developer on two driving-theory products, owning the mobile side end to end: architecture, file structure, library choices, screens and releases.
- **IDriver** — joined at ~40% readiness and took it to a public release on both stores. React Native + TypeScript on the client, NestJS / TypeORM / PostgreSQL on the backend.
- Wrote a Kotlin native module for storing push-notification payloads on the Android side.
- Closed a payment vulnerability that allowed access to paid content; reworked onboarding, which raised registration conversion by ~20%.
- Built an expert-answer pipeline: user questions routed to a Telegram group, expert replies (text or video) sent back through our backend to the client.
- Migrated all media storage from AWS S3 to Cloudflare R2, cutting per-user infrastructure cost by more than 70%.
- **New Test PDR** (under NDA) — new version of an already published state driving-theory service. Responsible for the whole mobile architecture, including an offline mode built on SQLite with sync, an operation queue and conflict resolution.

React Native Developer | DevIt Group Aug 2025 – Mar 2026

- Delivered and shipped several products to the App Store and Google Play — Fantasy Boss (UK market), Voice Notes, Echo Guardian — handling store submissions, review issues and follow-up fixes myself.
- Wrote a Swift native module rendering a live waveform animation for voice recording in Voice Notes.
- Fixed Android in-app purchases and built onboarding animations on a dating-style app.
- Worked in modular / Feature-Sliced Design codebases, both solo with a product manager and in a small team with backend and mobile engineers.

Full-Stack Developer | CGS Team Feb 2025 – Aug 2025

- Main developer on a localized apartment-booking app for Riyadh, Saudi Arabia, in a team of three.
- Built the mobile client from scratch: React Native (bare Expo), TypeScript, Redux Toolkit; integrated Moyasar payments, OneSignal push notifications and live chat over WebSockets.

React Native Developer | MyStatus Startup Nov 2022 – Feb 2025

- Built a geolocation- and map-based social network from scratch: chat, news feed, user profiles and app navigation.
- Stack: React Native, TypeScript, MobX, Firebase (storage, push notifications), REST API and GraphQL. Scrum team with front-end, back-end, PM and QA.

EDUCATION & LANGUAGES

Bachelor's degree in Cybersecurity — National Technical University "Kharkiv Polytechnic Institute" Sep 2019 – Jul 2022

Languages: Ukrainian — fluent · English — B1 (actively improving) · Russian — native
